

PAF Rapid Diagnostic

Find your adoption failure point in 3 hours.

"Designed for 8-year-olds. Applied to boardrooms."

Dimeji Obimakinde — Systems Architect & Behavioral Economist

THE CORE INSIGHT

Most enterprise system failures are not technical failures — they are cognitive load failures. Your ERP adoption collapsed, your compliance system got routed around, your post-merger integration stalled because the system asked your team to process Stage 4 complexity before their Stage 1 foundation was stable. PAF diagnoses exactly where that break occurred and maps the sequenced path back to stable adoption.

THE 4 DIAGNOSTIC TIERS

TIER 1 — CORE LOOP

Can your team complete basic daily tasks without workarounds? If not, every higher-tier complexity is compounding failure.

TIER 2 — PROCESS PATHWAYS

Are decision points clear? Stalled handoffs and approval paralysis signal poorly defined conditional pathways.

TIER 3 — LEDGER INTEGRITY

The primary site of cognitive blowout. Shadow spreadsheets and offline notes mean your team has abandoned the primary system entirely.

TIER 4 — EQUILIBRIUM GOVERNANCE

When departments optimise local targets over organisational health, silos form and strategic objectives become unreachable.

WHAT'S INCLUDED

- Pre-session diagnostic questionnaire
- 3-hour structured diagnostic session
- PAF Friction Report (4–6 pages)
- Stage mismatch score + re-entry roadmap
- 30-minute debrief call

INVESTMENT

\$2,000

Introductory rate · All deliverables included

Delivered within one week.

Standard rate: \$2,500

YOU NEED THIS IF...

- Your team built a shadow spreadsheet to replace the system you just deployed.
- Your ERP or CRM went live 6+ months ago and adoption is still below 40%.
- Two organisations merged and nobody agrees on which system to use.
- Your federal program passed review but implementation has stalled.

21+ Years Delivery · \$13M+ Programs Directed · Licensed Architect · MBA · CSM® · DOD · NSF · CBN · Federal Government MOU
